DMEK PUNCH A SUZIONE, LAMA CALIBRATA DA 100 µ, Ø10.0 mm
DMEK EYE BANKING VACUUM GUARDED PUNCH, Ø10.0 mm

JD2890FD.100

STERILE EO

x1

5 Years Shelf Life

Descrizione / Description

1. Lama Ø10.0 mm, profondità di taglio calibrata 100 µ
Punch blade Ø 10.0 mm with calibrated depth 100 µ
2. Base / Support
3. Raccordo / Syringe tubing
4. Siringa 5 cc con molla / 4. 5 cc spring syringe

Caratteristiche / Unique features

- Profondità di taglio a 0.10 mm che consente di individuare la Descemet velocemente
- 100 µ fixed-cutting depth allows safe and quick detection of the Descemet Membrane
- Ripetibilità della procedura garantita / • Predictable and reproducible system
- Mortalità cellulare assente / • No induced cellular mortality

DMEK PUNCH 100 µ LAMA CALIBRATA MISURE ADDIZIONALI - ADDITIONAL SIZES / 100 µ DMEK GUARDED PUNCH

La procedura DMEK è un nuovo traguardo nella chirurgia lamellare profonda. Grazie alla preziosa collaborazione iniziata con il Dott. R. Fogla, il nostro centro di ricerca è stato pioniere nel sviluppare e introdurre un sistema a suzione per questa procedura.

The DMEK procedure is a new achievement in deep lamellar surgery. Thanks to the precious collaboration begun with Dr. R. Fogla, our research center was a pioneer in developing and introducing a suction system for this procedure.

DMEK™ PUNCH
Tzamalis

STERILE EO | x1 | 5 Years Shelf Life

ONE-STEP YOGURT TECHNIQUE

La nuova tecnica di preparazione autonoma (Descemet peeling) nella procedura di trapianto DMEK, simula l'apertura di un vasetto di yogurt. Un metodo innovativo, sicuro ed efficiente, che fornisce tempi di preparazione più brevi e un basso tasso di insuccesso indipendentemente dal livello di esperienza del chirurgo

A new DMEK graft technique, which allows self-preparation of the lenticle with the peeling of the Descemet simulating the simple opening of a yogurt cup. A new innovative, save and efficient method, that provides shorter preparation time and low rate of failure independently of surgeon's experience level

FACILE / EASY

Il taglio del punch si estende fino alla linea di Schwalbe, dove la membrana di Descemet si stacca molto facilmente

Trephination extends up to Schwalbe's line in the periphery where DM is very easily peeled off.
The technique resembles, thus, the opening of a yogurt cup creating a hinge to grasp the graft

SICURO / SAFE

Nessuna perdita di cellule endoteliali in quanto tutte le manipolazioni sono fatte solo su tessuto in eccesso che funge anche da indicatore di orientamento lenticolo.
Niente più innesto a testa in giù

No endothelial cell loss as all manipulations are made only on excess tissue which also acts as an orientation marking.
No more upside-down placed graft

VELOCE / QUICK

La preparazione viene eseguita con la tecnica single-peel in meno di 5 minuti

Preparation is performed in a single-peel technique in less than 5 minute

CONVENIENTE / AFFORDABLE

Non sono necessari strumenti speciali o ulteriori punch corneali

No need for special instrumentation or multiple corneal punches

FALLO DA SOLO / DO IT YOURSELF

Crea il tuo innesto in sala operatoria, curva di apprendimento molto bassa

Create your graft in operating theatre, very low learning curve

FIXED DEPTH available size

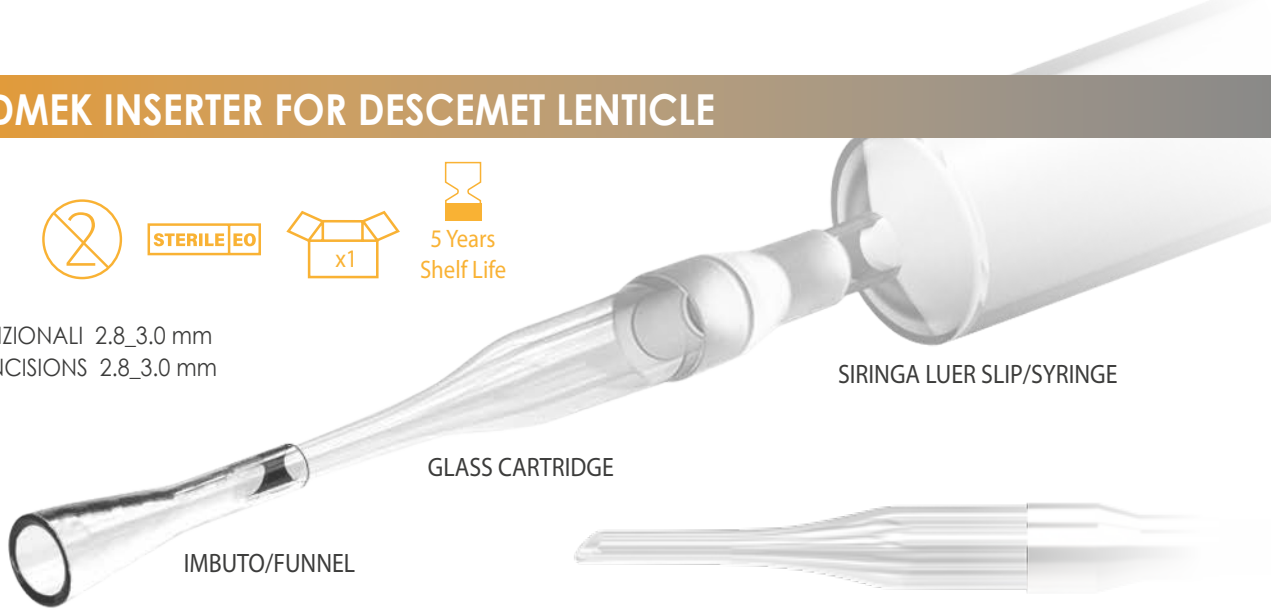
FEATURES:
PER INCISIONI CONVENZIONALI 2.8_3.0 mm
FOR CONVENTIONAL INCISIONS 2.8_3.0 mm



BEST SELLER

Il nuovo sistema basato, come concetto sul precedente kit di inserimento roll DMEK presentato nel 2013, migliora ed agevola la cattura del roll precedentemente "strippato" direttamente sul piatto di suzione del punch creato per la preparazione del roll che, immerso successivamente in soluzione bilanciata (BSS), verrà attraverso il cono applicato all'apice del cartridge, aspirato e convogliato agevolmente all'interno nel cartridge. Conclusa la fase di aspirazione del roll e verificando che sia stato correttamente posizionato nel cartridge, il cono verrà rimosso lasciando il sistema pronto per l'inserimento del lenticolo. Il cartridge potrà così essere inserito nella piccola incisione corneale attraverso la quale il roll verrà iniettato con la massima sicurezza e precisione. kit fornito completo di siringa, adattatore plastico, cartridge e cono di aspirazione.

The new system based on the same concept of the previous DMEK roll insertion kit introduced in 2013, improves and facilitates the capture of the lenticle previously "stripped" directly on the base of the suction punch used for its preparation. The roll, later soaked in balanced solution (BSS), will be easily aspirated inside the cartridgethrough the cone applied on the cartridge. Once the roll has been correctly positioned inside the cartridge, the cone will be removed leaving the system ready for delivery. The cartridge can then be inserted into the small corneal incision through which the roll will be injected with maximum safety and precision
The kit includes syringe, plastic adapter, cartridge and suction funnel

1 ACCERTARSI CHE L'IMBUTO SIA ASSEMBLATO AL CARTRIDGE
MAKE SURE THE FUNNEL IS WELL ASSEMBLED TO THE CARTRIDGE

2 ASSEMBLARE LA CARTUCCIA ALLA SIRINGA CON UNA PRESSIONE TALE DA RENDERE STABILE L'ACCOPPIAMENTO
ASSEMBLE THE CARTRIDGE TO THE SYRINGE WITH A PRESSURE SUCH THAT THE COUPLING IS STABLE

3 ASPIRARE DELICATAMENTE IL LENTICOLO ATTRAVERSO L'IMBUTO FINO A CHE NON GIUNGA NELLA ZONA CENTRALE DEL BECCUCCIO PER INIEZIONE
GENTLY ASPIRATE THE LENTICLE THROUGH THE FUNNEL UNTIL IT REACHES THE CENTER OF THE INJECTION SPOUT

4 RIMUOVERE L'IMBUTO / REMOVE THE FUNNEL

5 INTRODURRE L'APICE DEL CARTRIDGE NELL'INCISIONE ED INIETTARE LENTAMENTE IL LENTICOLO
INTRODUCE THE CARTRIDGE INTO THE INCISION AND SLOWLY INJECT THE LENTICULE

DISPOSABLE DMEK INSERTER FOR SMALL INCISION

JCP0011.2

STERILE EO

x1

5 Years Shelf Life

Sistema di inserimento lenticolo per piccola incisione. Il device è identico al sistema convenzionale (come sopra). Unica differenzia è nella dimensione del diametro di uscita del cartridge

DMEK inserter for small incision. The device is identical to the conventional system (like above). The main features of this is related to the smaller size of the cartridge.

FEATURES:
PER PICCOLE INCISIONI 2.3_2.5 mm
FOR SMALL INCISIONS 2.3_2.5 mm

CARTRIDGE IN VETRO/GLASS CARTRIDGE

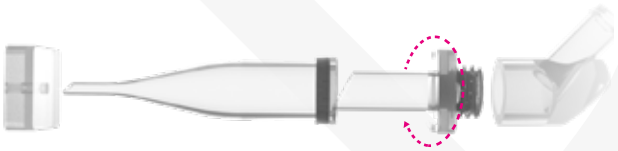
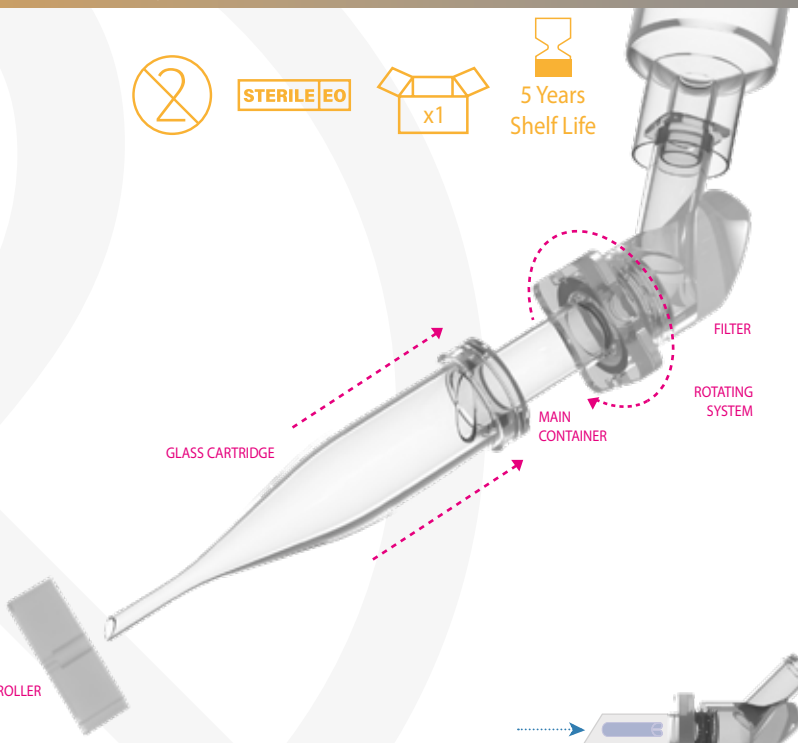
JD0012 DMEK INSERTER

STERILE EO

x1

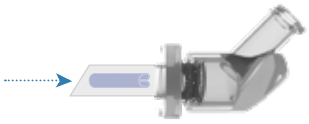
5 Years Shelf Life



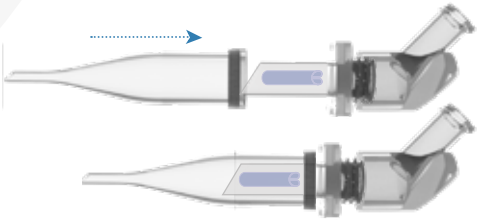


UNIQUE AND UNPARALLELED

1 ASPIRARE IL LENTICOLO ATTRAVERSO IL PRIMO CARTRIDGE DI GRANDI DIMENSIONI
1 ASPIRATE THE GRAFT INSIDE THE LARGER CARTRIDGE

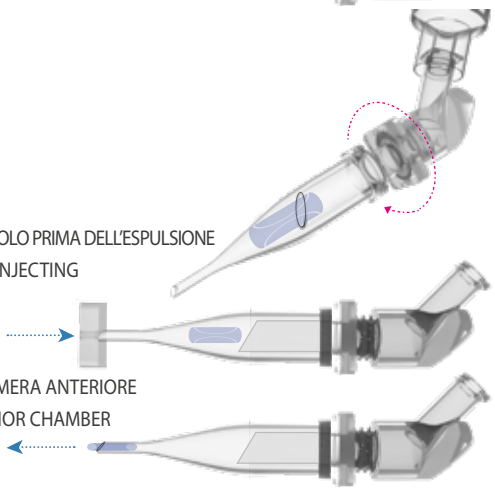


2 ACCOPPIARE CON IL SECONDO CARTRIDGE CON IL PRIMO
2 COUPLE THE SMALLER CARTRIDGE WITH THE FIRST



3 REGOLARE L'ORIENTAMENTO DEL ROLL PRIMA DELL'INIEZIONE, AGENDO SUL SISTEMA DI ROTAZIONE
3 ADJUST THE ORIENTATION OF THE ROLL BEFORE THE INJECTION BY ACTING ON THE ROTATION SYSTEM

4 POSIZIONARE IL REGOLATORE DI FLUSSO, CHE PERMETTE DI REGOLARE IL "DOUBLE SCROLL" E IL POSIZIONAMENTO DEL LENTICOLO PRIMA DELL'ESPULSIONE
4 POSITION THE FLOW REGULATOR TO ADJUST THE "DOUBLE SCROLL" AND THE POSITIONING OF THE GRAFT PRIOR TO INJECTING



5 RIMUOVERE IL REGOLATORE DI FLUSSO, INSERIRE IL CARTRIDGE NELL'INCISIONE, E INIETTARE DELICATAMENTE IN CAMERA ANTERIORE
5 REMOVE THE FLOW REGULATOR, POSITION THE CARTRIDGE INTO THE INCISION AND GENTLY INJECT INTO THE ANTERIOR CHAMBER

INSERITORE MIDI PER DMEK PER INCISIONI DA 2.4/2.5 MM, BY SARNICOLA M.D., STERILE, MONOUSO

Il sistema presenta diverse caratteristiche: ergonomia e semplicità di introduzione del lenticolo in camera anteriore grazie alla trasparenza del vetro, inoltre l' angolazione riprende il naturale e fisiologico approccio così come altri strumenti chirurgici

. Nella **prima fase** il contenitore centrale cattura e accoglie facilmente il roll (dm) attraverso una delicata e cotrollata suzione grazie a un filtro che previene ed evita l'aspirazione all'interno della siringa.
. nella **seconda fase** il sistema "midi" prevede l'accoppiamento del cartridge con il contenitore principale. il sistema è pronto per inserire il roll in modo corretto semplice, sicuro e sempre ripetibile. Caratteristica fondamentale è il sistema rotativo del contenitore centrale che permette di orientare correttamente il roll prima dell' inserimento

MIDI INSERTER FOR DMEK. 2.4/2.5 MM INCISION, BY SARNICOLA M.D., STERILE, DISPOSABLE

The system is introduced with innovative ergonomics, which facilitates the intruduction of the glass tip in the anterior chamber.
The angle, similar to many other traditional surgical instruments, allows a more natural and physiological approach

. In the **first step** the central glass captures the roll (dm), through a gentle and controlled suction, an innovative filter system control prevents the graft from being sucked into the syringe.
. in the **second step**, the "midi" cartridge (micro incision descemet inserter), is mounted on the main container making the system ready to inject the roll in a simple, proper and safe way. Importantly, the main container glass can be rotated thus allowing proper orientation of the graft before injecting

SCLERAL FIXATION IOL

5 PER BOX STERILE

STERILE EO x5 5 Years Shelf Life

JDS3869.1/5

Pinza coassiale 23G, con fusto leggermente curvo, per lenti a fissazione sclerale con anse a T/ancoraggio. Il design della pinza consente di afferrare delicatamente le anse della lente intraoculare (IOL) alla base, facilitando l'inserimento attraverso le incisioni sclerari. L'impianto della IOL risulta sicuro e garantisce ripetibilità. Progettata dal Dott. A. Pioppo

23G coaxial holder, slightly curved shaft, for scleral fixation lenses with T-shape/anchor loops. The design of the forceps allows you to gently embrace the loops of the lens (IOL) at the base, managing the insertion through the scleral incisions. The implantation of the IOL results in safety and ensures repeatability. Designed by A.Pioppo M.D.
